

Norsk e-Fuel signs MoU with Aurora Infrastructure to collaborate on energy infrastructure in Rauma, Finland

04th of March 2026, Oslo (Norway), Stockholm (Sweden)

Norsk e-Fuel and Aurora Infrastructure have signed a Memorandum of Understanding (MoU) to cooperate on the development of Norsk e-Fuel's Project Rauma in Finland. The partnership focuses on the development and construction of the electrical infrastructure such as grid connection and substation required to enable the large-scale production of synthetic, sustainable aviation fuel (e-SAF).

Under the MoU, the partners will explore a model in which Aurora Infrastructure designs, finances, builds, owns, and operates the electrical infrastructure for the planned e-SAF plant. This separation of energy infrastructure from fuel production will allow Norsk e-Fuel to concentrate on its core expertise in developing Power-to-Liquid plants, while supporting stronger overall project economics.

“Access to robust, reliable electrical infrastructure is a prerequisite for large-scale e-SAF production” says Lars Bjørn Larsen, CCO at Norsk e-Fuel. “By partnering with Aurora Infrastructure, we can reduce capital intensity in the project, improve returns, and focus fully on developing and constructing the fuel production plant. This MoU marks another important step towards realizing our projects in Finland.”

“We are proud to partner with Norsk e-Fuel, an innovative leader in the sustainable aviation fuel business. Their upcoming projects in Rauma but also in Tornio and Imatra will have significant positive impact both locally, regionally and throughout the Nordics” says Robin Lindahl, CEO of Aurora Infrastructure.

Norsk e-Fuel in brief

Norsk e-Fuel was founded in 2019 to drive the transition to sustainable aviation by establishing the industrial production of fuels based on CO₂ and water. As project developer, the company is establishing large-scale production sites across the Nordics to deliver synthetic fuels to the aviation industry. Supported by strategic investors and carefully selected partners, Norsk e-Fuel is set to bring Power-to-Liquid production to industrial scale and determined to develop a new value chain for sustainable fuels.

About Aurora Infrastructure

Aurora Infrastructure was founded in 2013, and is a leading company in financing, building, owning and operating industrial scale electrical infrastructure in the Nordic countries. The company is majority owned by Equitix, a leading international investor, developer and fund manager in sustainable infrastructure. Equitix was established in 2007 and has more than 15 billion euro assets under management.
